Versatile Software Developer with a strong Computer Science foundation, specializing in web development. Experienced freelancer proficient in Python, creating robust web applications and scalable solutions. Expert in SQL database management, version control with Git, and developing user-centric technologies. Skilled in full-stack web development, committed to delivering high-performance software solutions with a focus on innovative, cutting-edge technologies.

Education

Florida Atlantic University, FL USA   *Aug 2023 – May 2025*
MS in Computer Science

Lovely Professional University, India   *July 2019 – May 2023*
Btech in Computer Science

Experience

Software Intern   *Hyderabad, India*
Xploit Xperts   *Jan 2023 – July 2023*

As a freelance web developer intern, I had the opportunity to work on a variety of web development projects, gaining hands-on experience in both front-end and back-end technologies. I collaborated with clients to build responsive, user-friendly websites and applications using tools like HTML, CSS, JavaScript, React, Node.js, and more. This experience allowed me to develop essential skills in problem-solving, debugging, and managing client expectations while delivering high-quality projects on time.

Projects

Music Recommendation website   Nov 2024 - Dec 2024

- **Description**: StereoType is a Flask-based web app that provides personalized Spotify recommendations by analyzing a user's top artists and tracks. Using the Spotify API, it generates music suggestions tailored to individual preferences, helping users discover new music based on their listening habits.
- **Tools Used**: Python, Flask, Html, CSS, JS, Spotify API

Resume-Builder   March 2023 - Dec 2023

- Built with React, Node.js, and Material UI, our easy-to-use resume builder lets you create professional resumes in minutes. Customize templates to showcase your skills and experience, then download or share your resume effortlessly. Stand out to employers with a polished, modern design.
- Tools Used: React, Node.js, Material UI

Technologies

Front-end (Client-side): HTML, CSS, JavaScript

Frameworks/Libraries: React, Angular

Back-end (Server-side): Python

Frameworks: Django, Flask

Database: SQL (MySQL)

Version Control: Git, GitHub
